

Overview

The logo for rOculi features a stylized eye graphic with orange and yellow dots above the word "Oculi" in a cursive font.

Rays TechServ Pvt. Ltd. Is committed to providing specialized solutions for health care industry. Our rOculi Software solution has been designed and developed for Ophthalmologists to increase the efficiency of handling patient cases, increase the accuracy, privacy of patient data, and enable Ophthalmologists in providing a better and well managed patient care. We have worked closely with Ophthalmologists that ensuring that our products are designed to empower their existing environment.

“rOculi” is an electronic Clinical Management System (eCMS) that specifically targets Ophthalmologists by automating their entire clinical practice into a systematic set of processes from Patient Registration and Appointments to Patient Case Details such as Complaints, History, Vision, Fundus, A-Scan, Glaucoma, Slit lamp, Glass Lens, Contact Lens, Diagnosis, Investigation, Various Test carried out, Case Document preparation, Prescription, Allergies and much more, including the maintenance of Electronic Health Database for analytical, reporting and the generation of Electronic Health Records (EHR).

rOculi’s easy-to-use Data Entry Screens have intentionally been designed with pre-populated medical information specific to Eye treatment that enables the capture of maximum amount of information using mouse-clicks with minimal keyboard usage, reducing the time the Ophthalmologists spends on the software, hence increasing the doctor patient time.

rOculi is highly robust, user friendly, easy-to-use, reliable, secure and multi-user eCMS that can be configured on single computer for single user access, the Intranet for multi-user access within the boundaries of a local network, or the Internet for multi-user access providing users with secure access to the system anytime and anywhere.

rHealth

Key Features

Patient Appointment Scheduling

- ⇒ New Patient Registration
- ⇒ Scheduling and Follow-up

Patient Clinical Data Management

- ⇒ General information, Medical history
- ⇒ Complaints, Findings, Diagnosis, Investigations
- ⇒ Eye Statistics such as Vision, Fundus, A-Scan, Glaucoma etc.

Customizable prescription Generation

- ⇒ Allows users to print prescription in different size and format
- ⇒ Multi language support (English, Gujarati, Hindi)

Pre Populated Data

- ⇒ Disease diagnosis based on symptoms
- ⇒ Recommended treatment based on disease
- ⇒ Warning indicators for drugs based on patient allergies
